## Цель работы.

Научиться реализовывать логирование программы и запись логов в файл и терминал.

## Постановка задачи.

Реализовать набор классов, для ведения логирования действий и состояний программы.

Основные требования:

- Логирование действий пользователя
- Логирование действий юнитов и базы
- Реализована возможность записи логов в файл
- Реализована возможность записи логов в терминал
- Выполнены основные требования к логированию
- Взаимодействие с файлами должны быть по идиоме RAII

## Ход выполнения.

- 1) Был реализован набор классов для логирования в файл и терминал. Классы имеют общий интерфейс, поэтому взаимозаменяемы в программе. Взаимодействие с файлами происходит по идиоме RAII, при записи очередного сообщения файл открывается на до-запись, после записи файл закрывается. Так, в случае ошибки в программе или иной непредвиденной ситуации данные файла сохраняются. UML-диаграмма приведена на рис. 1.

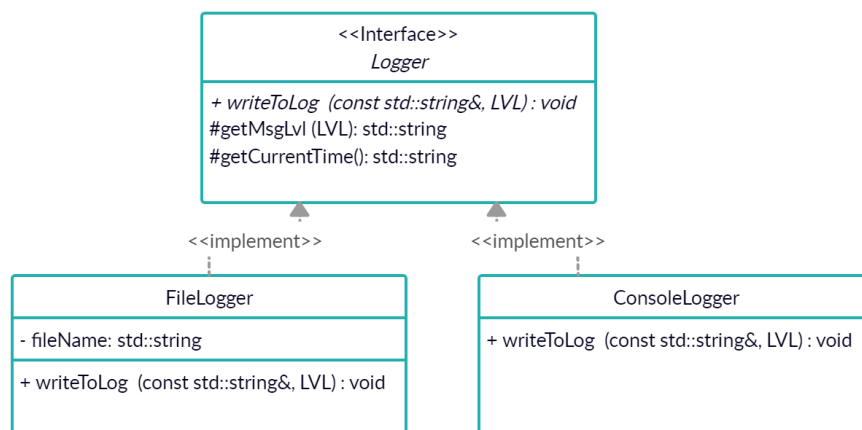

Рисунок 1- Набор классов логирования

- 2) Был реализован набор классов для генерации сообщений логов. Например, создание юнитов, их передвижение, действия пользователя и т.д. Сообщения позволяют логировать весь основной функционал игры. UML-диаграммы классов приведены на рис. 2.

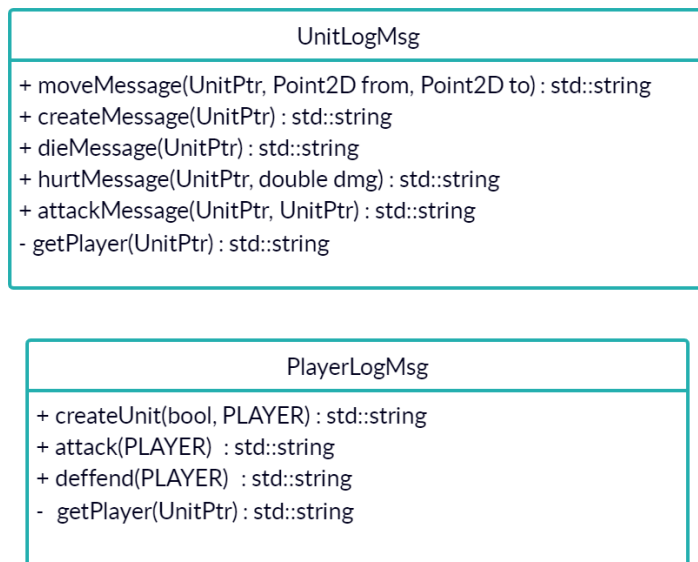

Рисунок 2- Набор классов для генерации сообщений

- 3) В классах Game, Mediator, Facade был добавлен функционал логирования, а именно запись логов при определенных событиях.
- 4) Было проведено тестирование. В приложении А приведено содержимое файла log.txt.

### **Выводы.**

В ходе выполнения работы были созданы наборы классов для логирования действий юнитов и пользователя. Были выполнены все основные требования.

## ПРИЛОЖЕНИЕ А. СОДЕРЖИМОЕ ФАЙЛА LOG.TXT.
